2 Research Interests

I am a fourth-year PhD student in UIUC, majoring in operations research, and currently doing research in mechanism design. In general, my research interests span a wide scope related to incentive-aware design and optimization for emerging applications in digital economy, including blockchain systems, e-commerce, ridesharing platforms and so on. I am also interested in data-driven mechanism design based on statistical/online learning, and topics in cryptography and distributed systems with applications in blockchain.

On a very high level, my (starry-eyed) dream for research lies in the following two fields, which are also the topics I am most actively working on:

- **AI for mechanism design:** e.g., using data-driven methods to improve the performance of economic platforms.

- **Mechanism design for AI:** e.g., using economic incentives to reinforce the efficiency and security of AI systems.
