2 Research Interests

I am a fourth-year PhD student in UIUC, majoring in operations research, and currently doing research in mechanism design. In general, my research interests span a wide scope related to algorithm and mechanism design for emerging applications in internet economics, including blockchain systems, e-commerce, ridesharing platforms and so on. I am also interested in data-driven mechanism design based on statistical/online learning, and topics in cryptography and distributed systems with applications in blockchain.

On a very high level, my (starry-eyed) dream for research lies in the following fields, which are also the two projects I am most actively working on:

- **AI for mechanism design**: e.g., dynamic auction design based on online learning;

- **Mechanism design for AI**: e.g., incentive-secure design for proof-of-learning mechanisms in blockchain systems.
